Calculate Order Revenue and Aggregate Revenue by City:

In [19]:
```
import pandas as pd

df = pd.read_csv("/content/bookbazaar_orders_2026.csv")
df = df.drop_duplicates(subset="Order_ID", keep="first")
```

In [20]:
```
df["City"] = df["City"].str.strip().str.title()
df["Delivery_Status"] = df["Delivery_Status"].str.strip().str.title()
df["Unit_Price"] = pd.to_numeric(df["Unit_Price"], errors="coerce")
```

In [21]:
```
df["Revenue"] = df["Quantity"] * df["Unit_Price"]
print(df[["Order_ID", "City", "Revenue"]].head())
```

```
  Order_ID         City  Revenue
0  ORD0001  Bhubaneswar   1598.0
1  ORD0002      Chennai    249.0
2  ORD0003      Chennai    349.0
3  ORD0004      Chennai    999.0
4  ORD0005       Mumbai   2397.0
```

In [22]:
```
delivered = df[df["Delivery_Status"] == "Delivered"]
print("Delivered orders with unknown revenue:", delivered["Revenue"].isnull().su
```

```
Delivered orders with unknown revenue: 1
```

In [23]:
```
city_revenue = delivered.groupby("City")["Revenue"].sum().sort_values(ascending=
print("Gross item revenue by city (delivered orders only):")
print(city_revenue)
```

```
Gross item revenue by city (delivered orders only):
City
Chennai        16921.0
Delhi          10819.0
Bengaluru       9820.0
Kolkata         7088.0
Pune            6388.0
Bhubaneswar     6141.0
Mumbai          3352.0
Hyderabad       1446.0
Jaipur          1395.0
